
Validation not working

Posted by kleeflang - 2008/03/28 13:26

Hi,

I'm using chronoforms om Joomla 1.5. for a while now, mostly it works great.

I'm having some trouble however with the validation.

In IE7 I can't get it work with prototype, it just passes the form with wathever is filled in regardless of validation.

It works with mootools, but then the "validate-one-required" doesn't work.

In firefox the prototype lib works fine.

Any ideas please?

Thank you,

Krijn Leeflang
