Hi,

I succeeded with uploading an attachment.

The only problem was that it was not possible to download the files from components > com\_chronocontact > upload  
In Joomla Config CHMOD new files is set to 0644

After some experiments such as Reset Ownership and CHMOD I got this error message which I can't get rid of it.

Parse error: syntax error, unexpected '

Hi Rajah,

The error message looks like it's caused by a typo in one of the input boxes. I'm not sure which one as I don't have any code in line 537 in my version but probably the 'OnSubmit after' box.

I download the files using FTP from my server . . . not quite sure what the problem is??

Thanks Bob, you are right!

Mistake by changing the "refresh"content="1"; instead of "1";

Most mistakes are made by correcting them....now I get  
You are not allowed to access this URL directly, POST array is empty.

The file is uploaded to the upload map with CHMOD 600  
I can't get this file: Cannot move file. Cannot read from source file (or something like that (is Dutch for me ; )

Oh, oh stupid me:blush: . Disregard the last problem! This is caused because the test is with a file from my desktop  
which I did download to the same desktop.

I have to look if all problems are solved now.

Edit again:

I am less stupid than I thought :)

I did put the test file in a separate map, but the problem still exists. Not possible to download the file.

Hi Rajah,

I'm just confused. I have no idea what you are doing or what doesn't work.

You are entirely right, it's a mess now.

I am making a new form from scratch and let you know what will be the result!

Sorry! :blush:

It works :laugh: and it's awesome! Did not know that the attachment was with the e-mail.

I was used to download it from the server (FacileForms).

The only thing I did forget was to set the map on 707.

Very nice Bob!
