## Is it possible to do a multilevel questionnaire?

Posted by Noterious - 2008/05/10 07:21

---

Is it possible to create a form with questionnaire like the following link?

[http://questexasia.ilinksys.com/subscribe\\_page.php](http://questexasia.ilinksys.com/subscribe_page.php)

If you click on option#2 in the first question, a drop down menu shows up.

How do you create it using Chronoform? Just put all the javascript in 'Form Javascript' window?

Thanks

Edit: Is it possible to use a separate database to collect the form data, not Joomla database?

Ho Noterious,

Yes, and Yes.

And just to double check - by drop down menu you mean the tool-tip that displays on the mouse-over? Or did I look at the wrong thing?

Bob

Thanks for the reply.

But, I meant the questionnaire in the purple table in the form.

If you click on option 2 of the question '1. \*What is the primary business activity of your company?', there will be another drop down menu shows up.

Thanks

Hi Noterious,

Ah - missed that completely. It looks as though most of the code for that is in the form so you'd need to replicate it there in ChronoForms and put the appropriate parts of script.js into the JavaScript box.

Here's the form code for Q10.

Now I have another problem. :(  
I want to use Mootools validation with the form, but my template has it loaded already. What should I do? I can't turn off Mootools in my template.  
Any help is appreciated.

Just choose mootools as the validation in Chronoforms, if it didnt work because of a conflict then go hack chronocontact.html.php so it doesn't load the files or just rename the folder "js" in the chronocontact folder so the files don't get loaded!

Cheers

Max

Thanks Max.

It turns out that Mootools is not a problem, but my own css class in the form creates the conflict.  
After a search through Chronoform forum, I found  
[http://www.chronoengine.com/component/option,com\\_fireboard/Itemid,37/func,view/id,7989/catid,3/](http://www.chronoengine.com/component/option,com_fireboard/Itemid,37/func,view/id,7989/catid,3/)  
, and it solved my problem.Thanks to the original poster! :)

Now I have to find a way to make my form worked with the div based multipage form.

You guys are awesome! I really appreciate the help.

Another problem comes up.  
By following the code here for the multipage div validation

I got an error 'ev is not defined' which I have no idea what to do.

Any idea would be appreciated

edit: I found a solution. Instead of using the code above for a form validation on 'Next Page' button, I use the following code instead. It works for me.
